Four functions of behaviour

		What it does for the individual	When it occurs	What can be done to prevent behaviour that is perceived to challenge
E Escape		Avoid or get away from undesirable events	When the event is too hard/easy/boring/scary etc.	Prompt functional communication response e.g. "I want a break"; pitch the demand at the correct level. Build demands in slowly and provide reinforcement for following instructions
A Attention		Gain access to people or interactions	When social interaction is desired	Provide attention when the individual is on task; prompt to gain attention appropriately (e.g. using names, tapping someone on the shoulder)
T Tangible		Gain access to preferred items or activities	When preferred items are desired	Teach the individual how to request preferred items appropriately (Makaton/PECS/vocals etc.)
S Sensory		Feels good, provides sensory feedback	Anytime, alone or with others	Provide the individual with an appropriate space to engage in the behaviour or if the behaviour is harmful find an alternative behaviour that meets the same sensory needs
